

Capstone Project Self-Assessment

Natalie English

CS-499: Computer Science Capstone

Mr. Jeff Phillips

Southern New Hampshire University

16 August 2026

This repository serves as a complete documentation of the development of my web application capstone project titled “Travlr Getaways”. This application was designed with three key categories in mind: software design and engineering, algorithms and data structures, and databases. Creating an ePortfolio is integral to showcasing one's skillset and specialties as well as serving as a highly visual way to communicate one's potential value to potential employers. The contents of this ePortfolio include several release versions of my project as well as written narratives explaining each change that I’ve made and features that I’ve added throughout this course, all of which are made to showcase my own skillset as well as well as my technical knowledge and my growth over time.
