

CS 499 Module One Assignment

Self-Introduction

How long have you been in the Computer Science program?

I have been in the Computer Science program for over 3 ½ years now, and I am working towards a bachelor's degree.

What are the three hard skills you learned while in the program?

The three most important hard skills I've learned during this program include:

- Computational Architecture: I gained an understanding of how hardware components work together, the similarities and differences between operating systems (i.e. Windows, iOS, Android), and the importance of computer networks and databases.
- Cybersecurity: I gained foundational experience in using security measures to protect sensitive information and organizational systems.
- Software Development: I can go through each stage of the Software Development Life Cycle intuitively and use best industry standards.

What are the three soft skills you learned while in the program?

The three most important soft skills I've learned during this program include:

- Problem-Solving: I can analyze a problem and create a solution using small logical steps.
- Adaptability: I can learn new frameworks, programming languages, and methodologies quickly.
- Team Collaboration: I work well with others on team-based projects and approach collaborative issues with empathy.

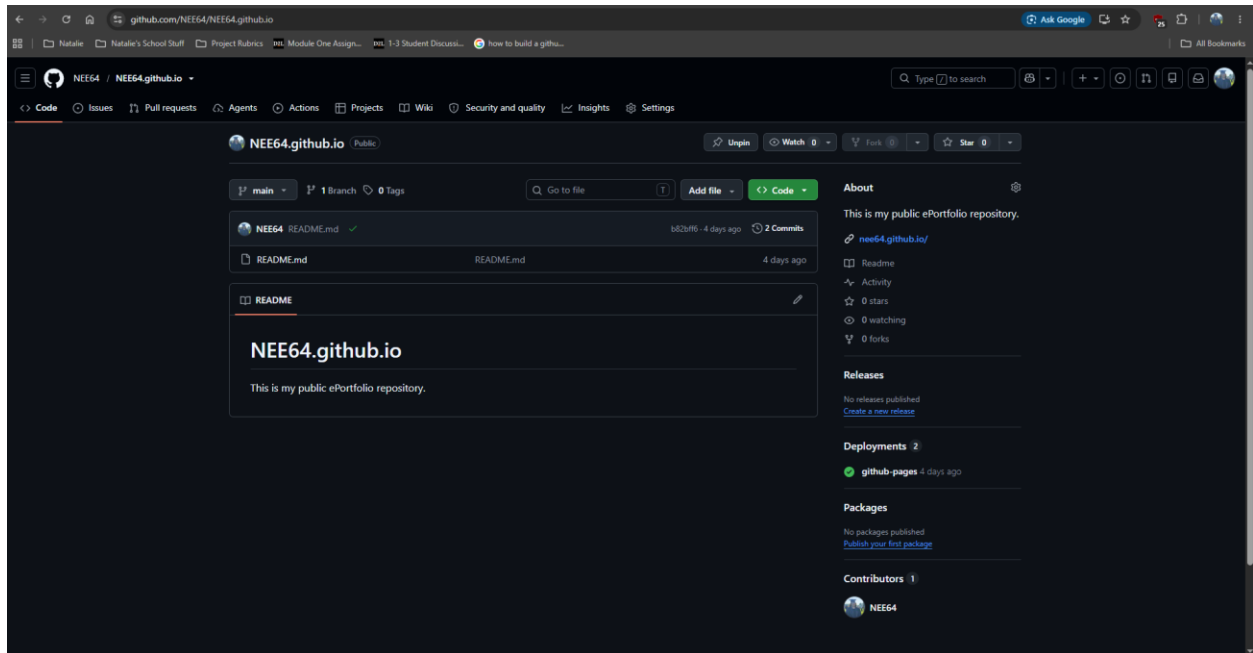

Discuss the specific skills you aim to demonstrate through your enhancements to reach each of the course outcomes. How do the specific skills you will demonstrate align with your career plans related to your degree?

I aim to primarily demonstrate my hard skills through my project enhancements because they will show future employers that I have the skills needed to perform well for software-related jobs. That being said, I am confident that my ePortfolio will also highlight my abilities to problem-solve and adapt to changes (i.e. debugging source code, IDE and programming language updates). Additionally, the skills I plan to highlight will align well with my long-term career plans because much of the healthcare industry requires them to function properly.

ePortfolio Set Up

Below is my screenshot of my GitHub home page with your URL

(<https://www.github.com/NEE64/NEE64.github.io>) at the top:

My Enhancement Plan

For my ePortfolio project, I will be using my full stack project from the course “CS-465: Full Stack Development I” at Southern New Hampshire University. This project is primarily in the “Software Design and Engineering” category, although this project also contains numerous

features of the "Algorithms and Data Structures" and "Databases" categories (i.e., the use of a NoSQL MongoDB database system). In this project, I developed both the frontend and the backend of a web application where users could view various vacation destinations and choose one they would like to book. For the enhancement, I plan to increase the cybersecurity of the application by allowing for the creation of user accounts that require a username and password to access, upgrading the website from HTTP to HTTPS by installing a SSL certificate and reconfiguring the source code), and testing for and patching potential vulnerabilities. This will enhance the experience of browsing this site and demonstrate my ability to maintain the highest industry standards for my work.
