02 August 2026

For this milestone, I finalized my work towards enhancing the source code of “Travlr Getaways”, my full stack web development project. This project has been fully debugged and the desired backend features (i.e. database interaction, logins, and user registration) have been implemented. During the last two weeks of this course, I will be working on the final enhancement: adding a TLS/SSL certificate and redirecting the website from “http” to “https” to ensure that all future web traffic is secure and adding comments to the source code where needed so that other developers can understand what each block of code does. Below are two photos proving that one can log into the database to add and edit trip information. For this test, I loaded the Gale Reef trip data and changed the name of the Gale Reef trip from “Gale Reef” to “Most Excellent Mega Reef Dive”.

Additionally, I corrected a small issue with the travel.html file where the copyright disclaimer at the bottom of the page had the wrong name; it now says “2023 by Travlr Getaways. All Rights Reserved” instead of “2023 by BHACCASYONIZTAS BEACH RESORT. All Rights Reserved”.
